

# Process for Identifying and Prioritizing Chemicals of Concern

# Options for Identifying CoCs

- Adopt broad set of evaluation criteria in regulation with a dynamic list maintained separate from the regulations
  - What criteria should be included in the evaluation criteria?
- Everything is CoC unless specific data available to demonstrate why it shouldn't be CoC
  - What data should this be?
- Additional options on Wiki
- Are there other options for a process to identify CoC????

# Options for Id CoC (cont)

- How should new chemicals or chemicals with insufficient data be treated?
  - Should lack of data exclude chemical from being designated as CoC?
  - Should lack of data automatically designate a chemical as CoC?
  - Should there be premanufacturing notification?

Are there other options for a process for identifying CoC when the chemical is a new chemical or chemicals with no data?????

# Options for Prioritizing CoCs

- Establish prioritization criteria
  - What should these criteria be?
- How can prioritization be structured to help identify safer alternatives during the alternatives assessment?
- Options on Wiki
- Are there other prioritization options?
